

Introducing Zero Data Loss: StandbyMP's new optional feature, available exclusively for Oracle Standard Edition

UPGRADE YOUR STANDBY MULTIPLATFORM SOFTWARE TO ZERO DATA LOSS (ZDL)

The Database Experts partner with Dbvisit to offer our customers comprehensive, intuitive and trusted Disaster Recovery

Dbvisit Standby MultiPlatform (StandbyMP) ensures disaster recovery (DR) for Oracle SE, reducing business disruption and ensuring database continuity.

Dbvisit StandbyMP enables management of your Oracle SE disaster recovery configurations through one common GUI, simplifying disaster recovery. It's available on premise, in the cloud, and for hybrid infrastructure.

Improve your RTO and RPO requirements with a continuously verified standby database that is always available and ready to take over.

Benefit from Zero Data Loss with Dbvisit StandbyMP's newest capability *

*ZDL is a licenceable feature

- **Automated Failover:** The failover assistant enables one-click failover, triggered manually or automatically.
- **Great RPO & RTO:** Recover from disaster in minutes. Achieve 5-minute RPO with archive log transfer, or <1-second RPO with the optional ZDL.
- **Graceful switchovers:** Planned switchovers enable easy migrations and testing.
- **Cloud ready:** Easy to configure on-premise, in hybrid or cloud environments. Supported in Azure, AWS and Oracle Cloud.
- **Smart Notifications:** Real time monitoring with heartbeat notifications, status alerts, and log gap reports.
- **One-click Resynchronization:** Automated resynchronization removes the risk of being unprotected as a manual rebuild is performed.

Why upgrade to ZDL?

- Reduce potential data loss from minutes to less than a second in suitable environments.
- Protect more of the transactions that matter, from payments and bookings to inventory movements and customer records.
- Avoid the need to move to Enterprise Edition for greater data protection.
- Keep your existing DR setup, with no new infrastructure or new dependencies required.
